

Key Findings

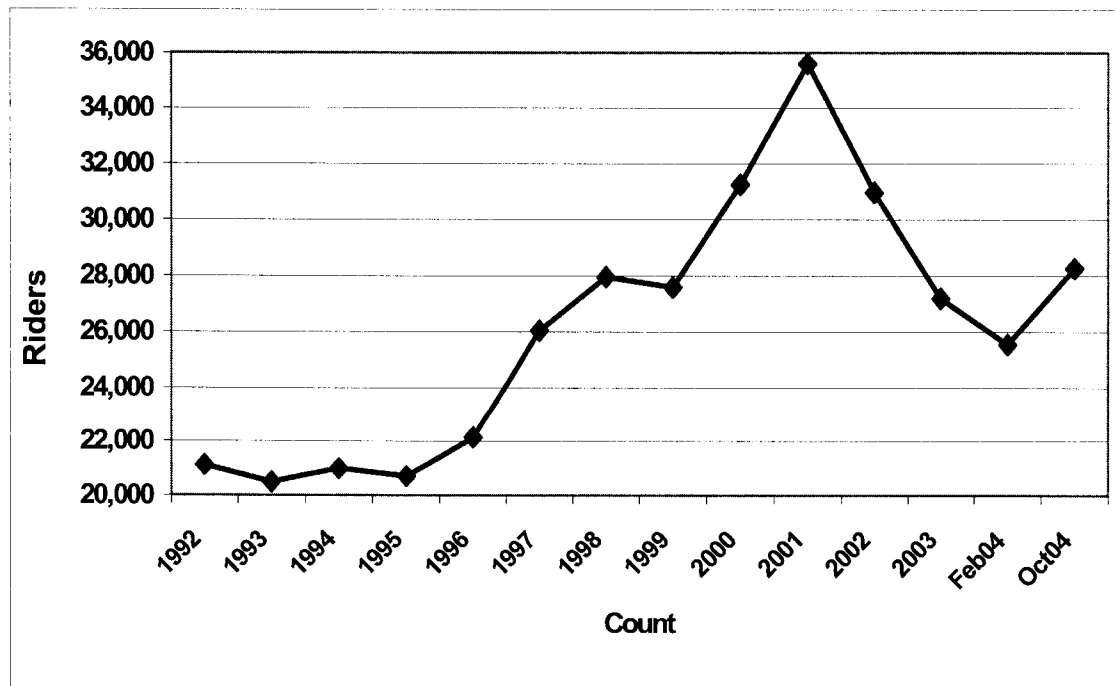

October 2004 Caltrain Passenger Counts

A comprehensive count and survey was conducted on Caltrain in October and November of 2004 to measure the impact of the implementation of Baby Bullet express service. The count was designed to compare to the annual February although methodologies differ between the two data collections. In October each train was counted once instead of trains being counted on 5 sequential weekdays, as is the practice for the annual February count. In October, trains were counted on Tuesday, Wednesday and Thursday to capture a “typical” travel day. This memo highlights the key data contained in the attached tables and graphs.

Overall Ridership

Weekday Ridership

Caltrain average weekday ridership (AWR) increased 11 percent as compared to last February, with a total of 28,270 average weekday boardings. The passenger count trend since 1992 is shown in the graph below. Since 1992 Caltrain AWR has increased by 34 percent. Until

implementation of Baby Bullet Service ridership had been declining from a peak reached in 2001 mainly due to the downturn in the economy, but other factors may have exacerbated the decline including the service reduction and fare adjustments that took place over the past three years. Since the implementation of the Baby Bullet Schedule, the ridership trend has been reversed. This is attributable to the increase in service and decrease in travel time.

Stations

The top 10 stations ranked by average weekday boardings are the same 10 stations as the top 10 found in the February count. There were some major shifts and percent changes in boardings, but the top 3 remained in the same order but saw significant increases in the numbers. The results are as follows:

Station	Oct 2004		Feb 2004		Change

Passenger activity increased at 13 stations but decreased at 17 stations. For stations that increased the average gain was +24.5%.

The regular (excluding special event and infrequently served stations) stations that showed the most overall change since February are as follows:

Absolute Change (Riders)	
4th & King	+794
SJ Diridon	+772
Mt View	+685
Palo Alto	+555
Hillsdale	+471
Millbrae	+311
San Antonio	-242
Sunnyvale	-176
Broadway	-158
22nd Street	+149

Stations served by the Baby Bullet show the most robust increase in passengers while several stations show decreases likely due to proximity to Baby Bullet stations (Broadway, San Antonio, Sunnyvale, Tamien) or reduction of service with the new schedule (Broadway, Ahterton, Tamien). Five non-Baby Bullet stations have shown gains in ridership that can be attributed to an increase in peak service or decreased travel time to key destinations (South SF, San Bruno, San Mateo, San Carlos, Redwood City).

Train Capacity

The October 2004 counts show that the traditional peak trains still tend to have higher peak loads than those in the reverse peak. Baby Bullet trains have attracted seated capacity crowds. Three of the six traditional peak direction Baby Bullet trains are at seated capacity. An additional traditional peak and one of the reverse peak Baby Bullets are as full (or fuller) than the most crowded train (81% full) from the February 2004 count found. The following table shows the five trains with the highest peak loads in both directions.

Northbound				Southbound			
Depart SJ	Train #	Max Load	Seats Full	Depart SF	Train #	Max Load	Seats Full
6:45a	325B	682	105%	6:13p	382B	647	100%

4:52p	275	317	61%	4:07p	164g	365	70%

B = Baby Bullet train, g = Gilroy train

In the peak, on average, each type of train carried the following number of passengers:

Baby Bullet	548
Limited	384
Local	312

This indicates the passengers' preference for shorter travel times.

Commuter Patterns

The traditional peak direction (northbound morning and southbound evening) and the reverse peak (southbound morning and northbound evening) commute markets both showed significant gains between February and October. The ratio of those traveling north in the morning to those traveling south in the morning has remained at approximately 60/40. In February 60.7% of the commute (peak) passengers traveled in the traditional direction, this increased to 61.6% in October. The reverse direction declined from 39.3% to 38.4%. This small shift should not be considered significant but could signal stabilization of the commute pattern or improved employment conditions in San Francisco relative to Silicon Valley. Additional gains in the traditional peak direction may be the result of more Baby Bullet service in the traditional peak direction. The following table shows the weekday ridership broken down by direction/time of day and change since February:

	Oct Riders	Feb Riders	Difference	Change
Traditional Peak	13,457	11,608	+1849	+15.9%
Midday	4,712	4,700	+12	+0.3%
Reverse Peak	8,400	7,513	+887	+11.3%
Night	1,699	1,694	+5	+0.3%
TOTAL	28,268	25,515	+2,753	+10.8%

Ridership on the commute/peak only Gilroy extension has shown continued decline. AM Peak boardings were counted in October at 627, this is a 6% decrease from the February count of 667. These figures do not include Tamien, where the ridership decrease may be attributable to nearby Baby Bullet service and SJ Diridon and a decrease in the daily number of trains serving Tamien.

Boardings by County

The table below shows a county-to-county comparison of all day boardings:

County	Oct '04 AWR	% of Oct '04 total	Feb '04 AWR	Oct vs Feb	% Change Oct vs Feb

This table also shows AWR as a percent of total AWR for each county.

Bicycles

The October count showed 2,301 bike boardings. This is over a 42% increase from the February number. Keep in mind that the February count is taken at a time of decreased bicycle activity due to weather, whereas October is a more peak bike riding month. The top five stations and trains by bicycle usage are listed below:

Weekend

Weekend service resumed on June 5, 2004, the weekend before the start of the weekday Baby Bullet schedule and service. This was a resumption of weekend rail service after a two year shut down for construction activities. During that time limited substitution bus service was provided to five stations. Saturday service was restored to exactly what it was before the suspension of service. Sunday service was increased 50% to provide hourly service. This makes Sunday service similar to Saturday but with a later start-up and earlier last trains. Service between Tamien Station and San Jose – Diridon Station is provided by a van-like shuttle on the weekends.

Ridership has not recovered to 2002 levels as the following summary chart shows:

	2004 Count	2002 Count	Numeric Change	Percent Change
Saturday	8587	10443	-1856	-17.8%
Sunday	5631	6153	-522	-8.5%
Total	14218	16596	-2378	-14.3%

The most significant change in ridership has been the large increase (70%) of passengers using the Millbrae station. This increase is seen in southbound boardings and northbound alightings, indicating transfers to BART.

Approximately 217 riders used the Tamien shuttle each weekend in October, in almost the same numbers on Saturday and Sunday. The average number of riders per trip is 4.
