

Key Findings

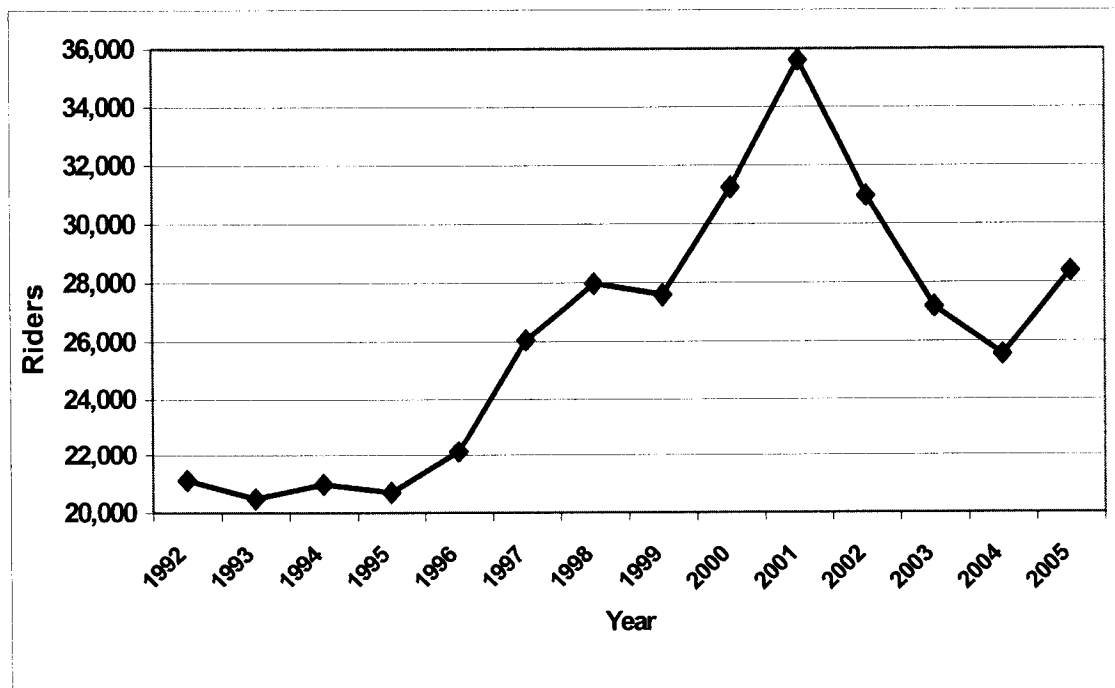

February 2005 Caltrain Annual Passenger Counts

The annual Caltrain passenger counts were conducted in February 2005 as has been done every year for the last decade and less consistently before that back to 1992. This count followed a comprehensive count and survey conducted on Caltrain in October 2004 to measure the impact of the implementation of Baby Bullet express service in June 2004. The February 2005 count follows the methodology of the annual counts of previous years. After two years of discontinued weekend service during the CTX construction project, weekend counts are again included.

Overall Ridership

Weekday Ridership

Caltrain average weekday ridership (AWR) increased just over 11 percent as compared to February 2004, with a total of 28,393 average weekday boardings. The passenger count trend since 1992 is shown in the graph below. Since 1992 Caltrain AWR has increased by 34 percent.

Until implementation of Baby Bullet service, ridership had been declining from a peak reached in 2001 mainly due to the downturn in the economy. Other factors may that have exacerbated the ridership decline include service reduction and fare adjustments that took place over the past three years. Since the implementation of the Baby Bullet schedule, the ridership trend has been reversed.

When ranked by average weekday boardings, the top 10 stations remained composed of the same 10 stations in both the February 2004 and February 2005 counts. There were some major shifts in absolute numbers and percent changes of total boardings, however the top three stations

remained in the same order and all three had significant increases in boardings. The results are as follows:

Stations with Baby Bullet service showed the highest percentage and absolute number gains in ridership. Non-Baby Bullet stations San Mateo (+58) and Redwood City (+63) showed moderate gains in ridership. The following stations lost 50 to 100 riders: Atherton (-60), Bayshore (-97), Belmont (-50), College Park (-59), Hayward Park (-70), Lawrence (-60), San Antonio (-87) and Santa Clara (-91).

The regular (excluding special event and infrequently served stations) stations that showed the most overall change since February 2004 are as follows:

Largest Absolute Change (Riders) Feb 04 to Feb 05	
Mt View	+904
San Francisco	+845
SJ Diridon	+722
Palo Alto	+576
Hillsdale	+407
Millbrae	+359
Sunnyvale	-179
22 nd Street	+163
Tamien	-137
California Ave	-137
Broadway	-129

Stations served by the Baby Bullet show the most robust increase in passengers while several stations show decreases likely due to proximity to Baby Bullet stations (Broadway, Sunnyvale, Tamien) or reduction of service with the new schedule (Broadway, Atherton, Tamien).

Train Capacity

The February 2005 counts show that the traditional peak trains and Baby Bullets continue to have the very highest peak loads. Three of the six traditional peak direction Baby Bullet trains are at or near seated capacity. Baby Bullets dominate the list of the five most crowded trains in each direction. The following table shows the five trains with the highest peak loads in both directions.

In the peak, on average, each type of train carried the following number of passengers:

PASSENGERS PER TRAIN (peak hours)

Baby Bullet	542
Limited	391
Local	364

This indicates the passengers' preference for shorter travel times.

Commuter Patterns

The traditional peak direction (northbound morning and southbound evening) and the reverse peak (southbound morning and northbound evening) commute markets both showed significant gains since the implementation of the Baby Bullet schedule (Feb 2004 to Feb 2005). The ratio of those traveling north in the morning to those traveling south in the morning has remained at approximately 60/40. In February 2004 60.7% of the commute (peak) passengers traveled in the traditional direction; this increased to 61.1% in February 2005. The reverse direction declined from 39.3% to 38.8%. This small shift should not be considered significant but could signal stabilization of the commute pattern or improved employment conditions in San Francisco relative to Silicon Valley. Additional gains in the traditional peak direction may be the result of more Baby Bullet service in the traditional peak direction. The following table shows the weekday ridership broken down by direction/time of day and change since February 2004:

PASSENGERS BY MARKET (time of day/direction) – COMPARISON TO 2004

	2004 Riders	2005 Riders	Difference	Change
Traditional Peak	11,608	13,291	+1683	+14.4%
Midday	4,700	4,799	+99	+2.1%
Reverse Peak	7,513	8,444	+931	+12.4%
Night	1,694	1,859	+165	+9.7%
TOTAL	25,515	28,393	+2,878	+11.3%

Ridership on the commute/peak only Gilroy extension has shown continued decline. The February 2005 boardings were 578. This is a decline of 89 or 13% from the February 2004 count of 667. These figures do not include Tamien, where the ridership decrease may be attributable to nearby Baby Bullet service at SJ Diridon station and a decrease in the daily number of trains serving Tamien.

Boardings by County

The table below shows a county-BY-county comparison of all day boardings:

Bicycles

The February 2005 count showed 1,860 bike boardings. This is a 15% increase from the February 2004 number of 1,614. The top five stations and trains by bicycle usage are listed below:

Weekend

Weekend service resumed on June 5, 2004, the weekend before the start of the weekday Baby Bullet schedule and service. This was a resumption of weekend rail service after a two-year shut down for construction activities. During that time, limited substitution bus service was provided to five stations. Saturday service was restored to exactly what it was before the suspension of service. Sunday service was increased 50% to provide hourly service. This makes Sunday service similar to Saturday but with a later start-up and earlier last trains. Service between Tamien station and San Jose Diridon station is provided by a shuttle on the weekends.

Ridership has not recovered to 2002 levels as the following summary chart shows:

	2002 Count	2005 Count	Numeric Change	Percent Change
Saturday	10,299	6,933	-3,366	-32.7%
Sunday	5,962	5,110	-852	-14.3%
Total	16,261	12,043	-4218	-25.9%

The most significant change in ridership has been the large increase (76%) of passengers using the Millbrae station. This increase indicates increased transfers to and from BART and reflects the increased ridership on the BART extension that opened in 2003. All other stations have lower passenger counts than in 2002.
