

Bicycle Advisory Committee - Follow Up Items

<i>FOLLOW UP REPORT - BAC as of September 2013</i>					
Requestor	Request for Action	Staff Responsible	Dt. Requested	Dt. Completed	Comments
Edward Saum	Trains 272 and 376 share the same platform out of San Francisco and it causes congestion as people are waiting and crowding by the doors.	A. Maguigad	5/16/2013	9/18/2013	Currently, these two trains are assigned to depart from the same platform within a short amount of time. The parameters for track assignments require that two successively departing trains depart from different platforms. While these two trains depart within 13 minutes of each other, there is another train that departs between them. Caltrain is looking at adjusting the schedule to support some upcoming construction projects as well as reviewing the pairings of each train consist to maximize efficiency. As part of this, Caltrain will review the track assignments at San Francisco and determine what can be done to improve the use of this station to alleviate crowding in one part of the terminal at any given time. There are some constraints that must be considered to ensure that the trains are paired correctly for bicycle and seating capacity and that the operational efficiency of the station network is maintained.
Garrett Turner	Add discussion about making 3rd bike car on bombardiers	A. Maguigad	7/18/2013	9/18/2013	This topic has been agendized and will be discussed at the Sept. 19 BAC meeting.
